

CCCM CAMP COORDINATION & CAMP MANAGEMENT

PROGRAMME OVERVIEW

PROGRAMME HIGHLIGHTS 2022

182,931

Individuals reached with assistance

86

IDP hosting sites supported through site coordination and management activities

43

IDP community committees established in IOM sites to support site-care activities and community inclusion

18,114

Individuals benefited from community led projects

The International Organization for Migration's (IOM) CCCM programming aims to improve the living conditions of displaced families living in informal and formal sites, collective centers, communal buildings, and spontaneous settlements in four governorates (Ma'rib, Al Hodeidah, Ibb, and Ta'iz), including the largest IDP hosting site in Yemen, Al Jufainah, in Ma'rib. The CCCM response in Yemen is critical to ensuring dignity, safety, and protection for the most vulnerable displaced populations through core site management activities, including site assessments, IDP registrations, mapping of needs, vulnerabilities, and gaps, referrals, community mobilization, and coordination of the humanitarian response within the site. The CCCM field teams also collaborate with other IOM programs to provide an integrated response in sites, including water, sanitation and hygiene (WASH), shelter and non-food items (S-NFI), Cash, Health, and Protection activities in these sites, and mobilize external partners to ensure additional support is provided. The program also provides technical advice and capacity building to authorities acting as camp administration, IDP camp committees, and national non-governmental organizations working in site management. This approach is complemented by a strong focus on physical improvements to the sites, and care and maintenance to enhance living conditions and reduce exposure to natural hazards and diseases.

To mitigate impacts of and address needs related to flooding in displacement sites, IOM has adopted an anticipatory approach to reduce the impacts of flooding, through site infrastructure upgrades such as embankments, retention walls, and gabion wall construction. These interventions have shown to limit environmental degradation by preventing flooding at the source and channeling floodwater through sites away from impacted displaced groups. Additionally, IOM enhances the local community's capacity to implement flood preparedness activities and maintain effective coordination to mitigate impacts of flooding in sites by training site level emergency response committees on identification of high-risk areas and evacuation plans as well as community mobilization and rapid response.

COORDINATION AND SERVICE MONITORING

As conflict continues to drive displacement, most displaced people resort to existing displacement sites which strains basic service provision and forces many to live in deplorable conditions. IOM conducts regular monitoring of needs in the sites, maintains a comprehensive mapping of site-level service gaps, and establishes a site-level complaint and feedback mechanism to ensure dignified living conditions for displaced populations.

Housing, land and property issues remain a serious challenge. IOM continues to coordinate with authorities, sub-clusters and landowners to prevent and respond to encountered eviction threats. IOM works closely with authorities and the CCCM sub-clusters to prevent unannounced forced evictions and identify alternative housing arrangements for households living in informal settlements or public buildings and facing eviction risks.

CARE AND MAINTENANCE OF SITE INFRASTRUCTURE

Through a participatory approach, IOM implements various site improvement projects and conducts regular care and maintenance of site infrastructure to improve living conditions and mitigate the impact of seasonal flooding and fires, reduce the risk of the spread of communicable diseases, increase site safety and improve service delivery.

Where possible, IOM implements these activities through cash for work as it provides income opportunities to IDPs and enhances their sense of involvement and participation.

COMMUNITY MOBILIZATION AND CAPACITY BUILDING

IOM strives to provide displaced communities with the tools and support necessary to promote community participation in site management. IOM targets local authorities, site focal points, and community committees with CCCM trainings to help them resolve the various issues they face at the site level and build their skills in coordination, information management, community participation and monitoring. Through training of trainers (ToT), IOM empowers key community members to conduct training themselves and thus ensures capacity building remains a continuous priority in displacement sites.

The CCCM teams also conduct community mobilization and relative capacity building on awareness raising on COVID-19 preparedness and response, encouraging community participation, and creating opportunities for often excluded groups, such as women, persons with disabilities and youth, to take part in camp leadership and other empowerment initiatives.
